## Security Gates & Fences

## Cantilever & Gates

Cantilever Sliding Gates, are suspended above the driveway with no need for ground tracks or wheels. This type of gate can span large openings over sealed or unsealed surfaces. This type of gate can also travel over uneven surfaces without complications. Suited to heavy/high traffic driveways and industrial applications. These gates can be Automated or Manual.

## Fence

Security Fencing, supplied in pre-made Galvanised sections, these panels are easily installed and offer a secure and durable security fence. Made from box section steel, this type of fence offers a ridged fence line with a formidable pinched spike atop. Fencing is available in 1800mm, 1500mm and 1200mm high panels.

## Sliding Gate

Sliding Gates, move from side to side travelling on a ground mounted steel track. These gates can be fitted to existing or new driveways. The gate rolls on the track supported by two wheels. This type of gate offers security without the use of a lot of internal space. Suited for security in light commercial and industrial applications. These gates can be Automated or Manual.

## Swing Gate

Swinging Gates, DOUBLE, SINGLE or PEDESTRIAN gates made in the same product as the security fence. This type of gate swings open hinged on posts or columns. Locking with latches chain or automation, these gates are easy to use. Swinging gates are available 1800mm, 1500mm or 1200mm high. This type of gate can be Automated or Manual.
